

SERVICES

Because it all happens inside

1. Camera inspections
2. Wall thickness measurement
3. Water analyses
4. Corrosion monitoring
5. Research into the cause of corrosion
6. Materials research
7. Independent advice
8. Additives: prevent corrosion

APPLICATIONS

1. Sprinkler systems
2. Foam extinguishing systems
3. Risers
4. Dry extinguisher pipe
5. Tunnels
6. Cooling water systems
7. Aviation
8. Industry
9. Construction
10. Shipping

WHY CAMERA INSPECTION?

1. There is a leakage in a pipe
2. Detecting corrosion and clogging
3. You want to know the internal condition of your piping
4. Better and ontime budgetting
5. Added value to potential tenants
6. Controlling corrosion
7. Preventive maintenance is cheaper than corrective maintenance
8. Saving money on maintenance, renovation or replacement
9. Good addition to the NEN 2767
10. Pre purchase- or sales inspection
11. An inspector requires an internal inspection of the system

DID YOU KNOW THAT

Corrosion was in 2009 with 56% the largest cause of leaks in sprinkler systems

Corrosion damage in NL is estimated at 3% of GDP! Then we talk about +/- 18 billion Euro!

Our additive also protects in the air layers above the water. This is because it is an VCI! A volatile corrosion inhibitor.

Corrosion by oxygen and MIC are the two mains forms of corrosion in sprinkler systems.

The NFPA 25 requires every 5 year an internal pipe inspection.

You can saves lots of money by a remaining life investigation, because existing pipelines could perhaps be reused.

In Europe are annually about 4000 deaths by fire

By inspecting preventively, you can save also money

The first experiments with sprinklers took place in the 18th century

As far as known, in NL has never been a fatality cases in a building with a sprinkler system

You need to add only 1% of our additive to your system. Of course this must be maintained!

Because it all happens inside
